TEISCO

Teisco (テスコ) started out as a Japanese manufacturer of affordable musical instruments in 1948. Known for its electronic innovation and unconventional aesthetic, artists and musicians alike choose Teisco as an affordable yet more experimental option. Teisco continues to enjoy strong collectors' interest today and is still regarded as a vintage favorite.

Today, we are continuing to innovate, making affordable sound-altering products to inspire new generations to push their musical boundaries. We are kicking things off with a line of bold design-forward pedals, with future plans to reintroduce more creative tools and instruments for the modern musician.

DELAY

The Teisco Delay celebrates everything beloved about analog delays — dark, warm repeats and the ability to cascade your signal into oblivion. With up to 600ms delay time, a rich Modulation section and a Direct Out for the ultimate tone chasers who want to run wet/dry rigs, the Teisco Delay is a bold step into the world of experimental analog delays.

FUZZ

The Teisco Fuzz — a classic silicon fuzz circuit with a switchable upper octave that takes inspiration from a furry 70s predecessor. Unlock searing lead lines, gnarly textures, synth-like overtones, and every shade in between.

BOOST

Just like the vintage preamp it's modeled after, the Teisco Boost is loaded with a field-effect transistor (FET) for softer, more organic clipping and can run at 24V via the voltage switch for extra headroom. The EQ profile switch also provides extra tweakability when you need it. Whether you need a tone-enhancing buffer or extra 'oomph' for your drives and amps, the Teisco Boost covers it all.
